

# **Using Single-Row Functions to Customize Output**

# Objectives

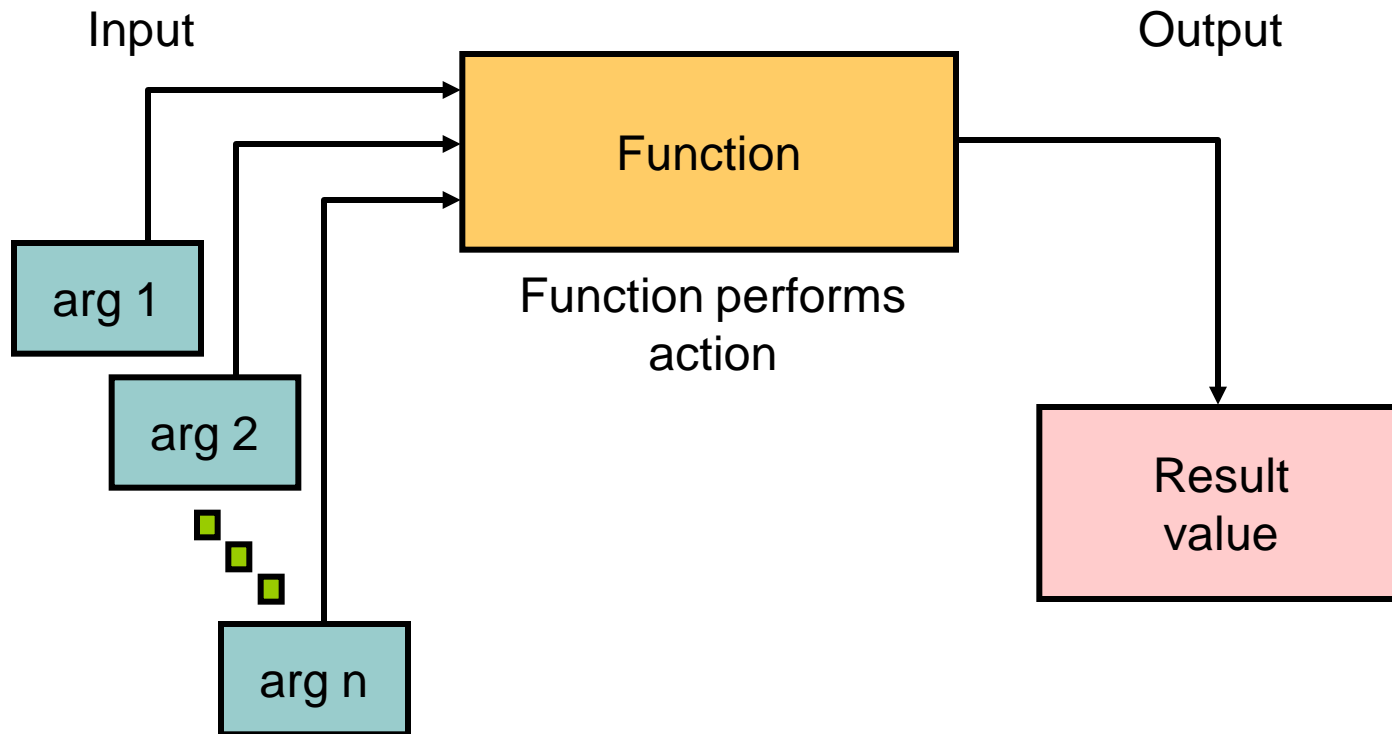

After completing this lesson, you should be able to do the following:

- Describe the various types of functions available in SQL
- Use the character, number, and date functions in `SELECT` statements

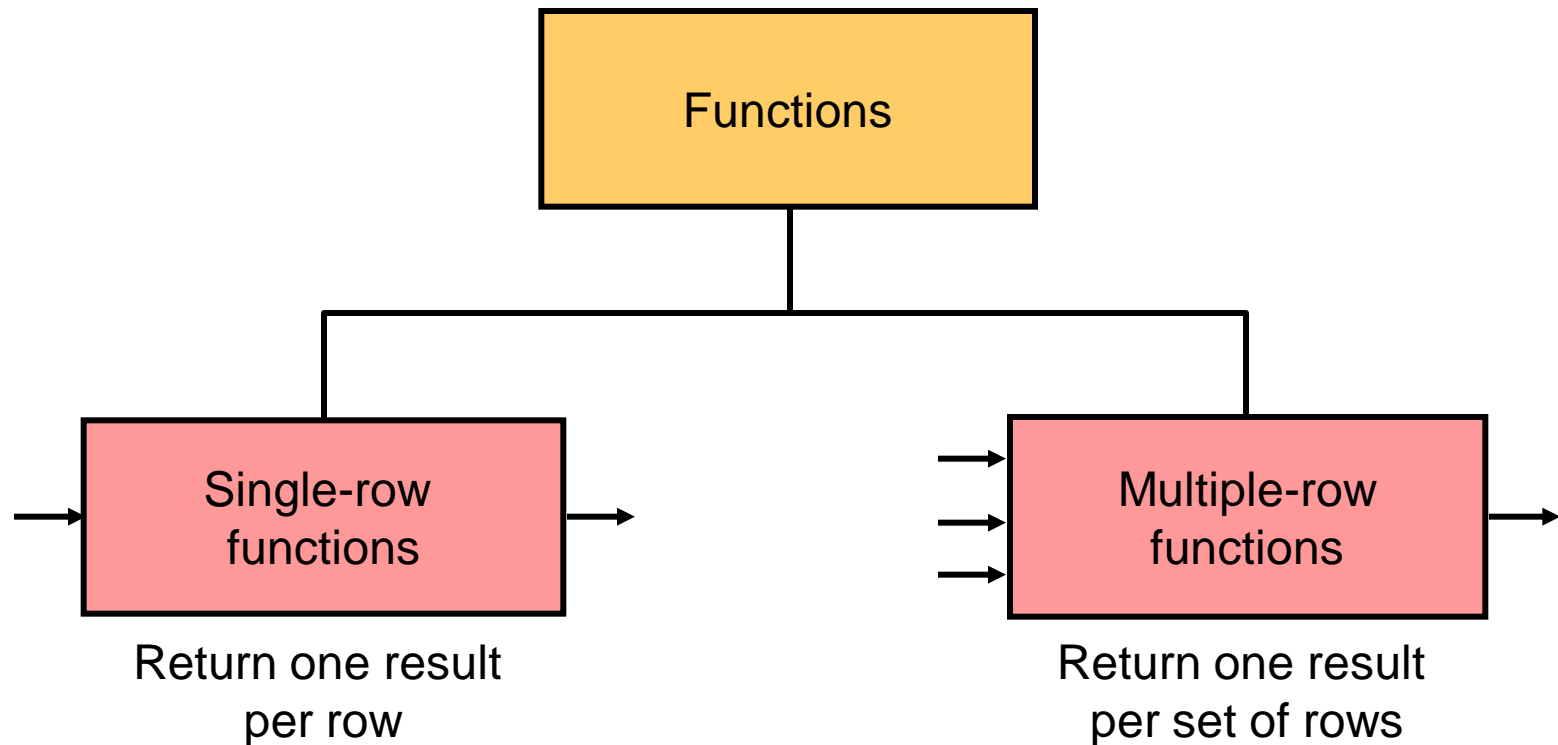

# Lesson Agenda

- Single-row SQL functions
- Character functions
- Nesting functions
- Number functions
- Working with dates
- Date functions

# SQL Functions

# Two Types of SQL Functions

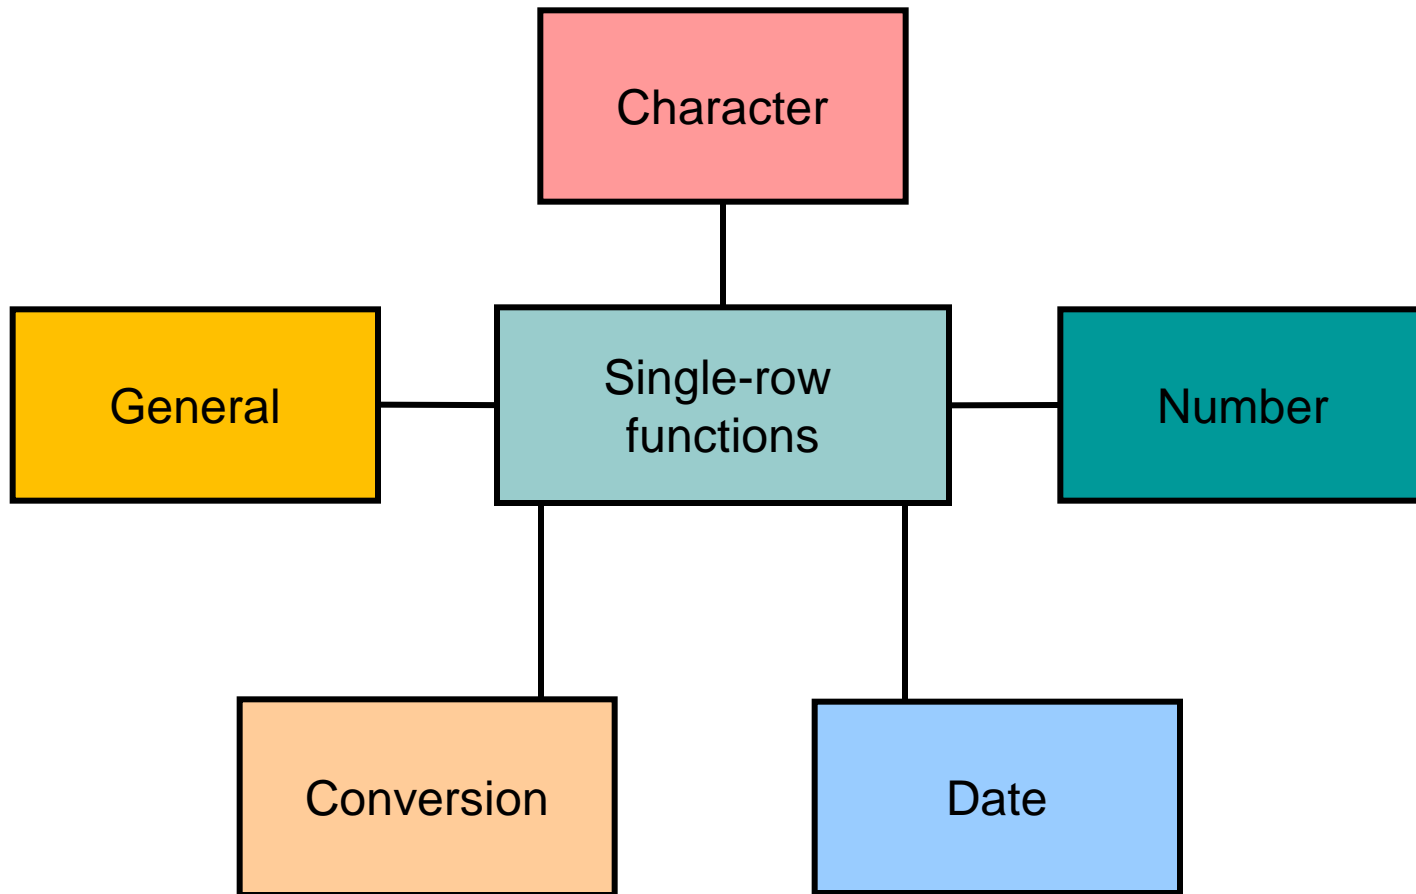

# Single-Row Functions

Single-row functions:

- Manipulate data items
- Accept arguments and return one value
- Act on each row that is returned
- Return one result per row
- May modify the data type
- Can be nested
- Accept arguments that can be a column or an expression

```
function_name [(arg1, arg2,...)]
```

# Single-Row Functions

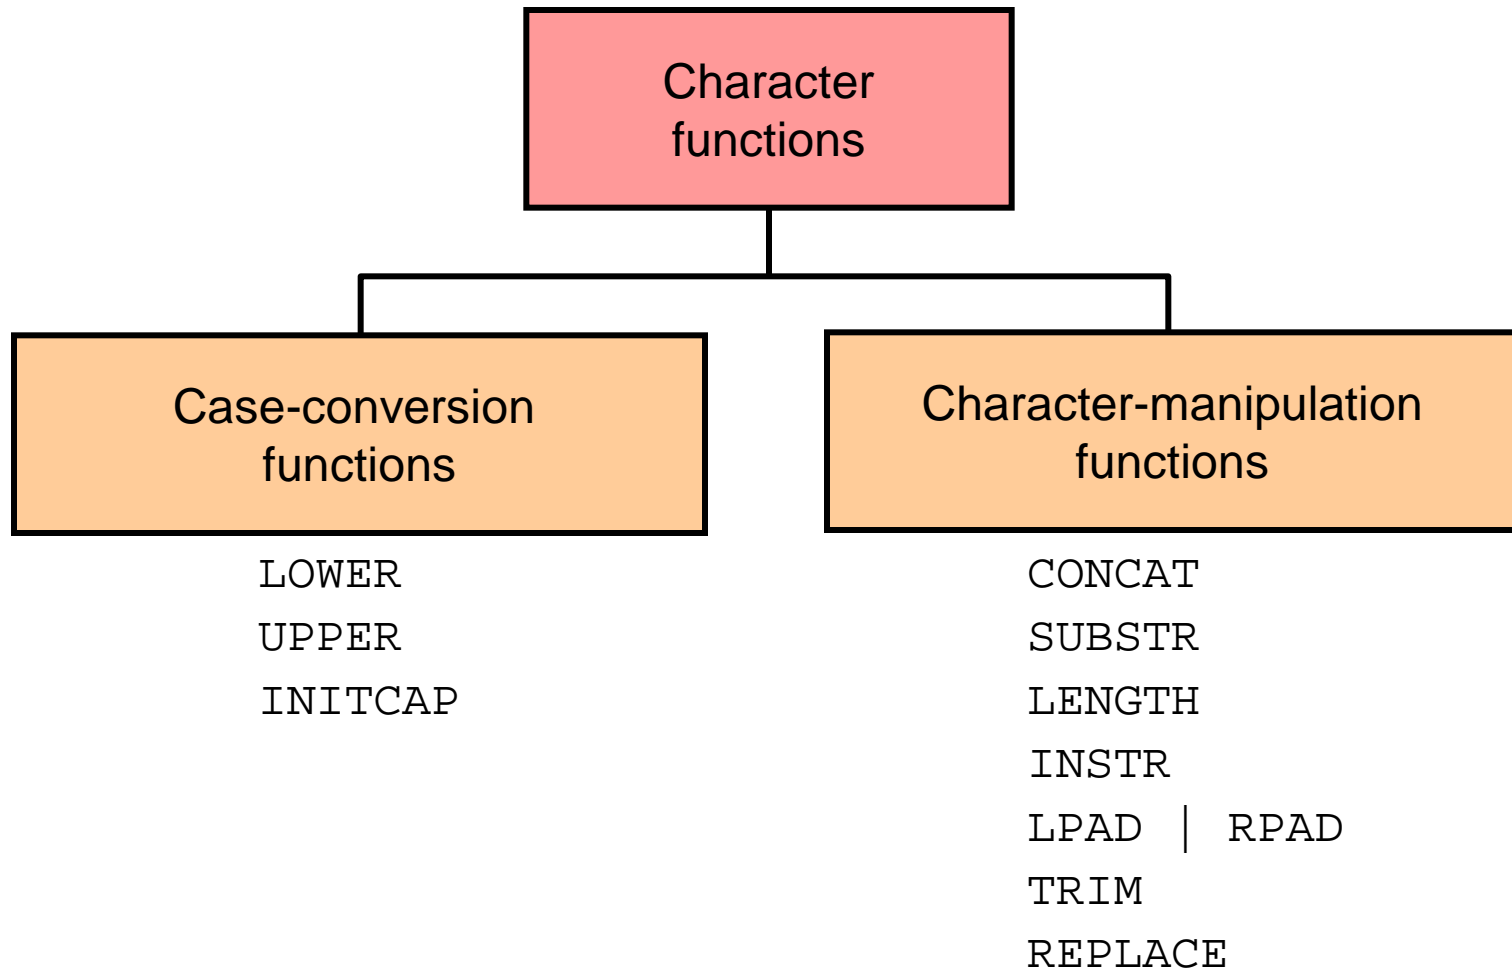

# Lesson Agenda

- Single-row SQL functions
- **Character functions**
- Nesting functions
- Number functions
- Working with dates
- Date functions

# Character Functions

# Case-Conversion Functions

These functions convert the case for character strings:

| Function                             | Result     |
|--------------------------------------|------------|
| <code>LOWER( 'SQL Course' )</code>   | sql course |
| <code>UPPER( 'SQL Course' )</code>   | SQL COURSE |
| <code>INITCAP( 'SQL Course' )</code> | Sql Course |

# Using Case-Conversion Functions

Display the employee number, name, and department number for employee Higgins:

```
SELECT employee_id, last_name, department_id
FROM   employees
WHERE  last_name = 'higgins';
```

0 rows selected

```
SELECT employee_id, last_name, department_id
FROM   employees
WHERE  LOWER(last_name) = 'higgins';
```

|   | EMPLOYEE_ID | LAST_NAME | DEPARTMENT_ID |
|---|-------------|-----------|---------------|
| 1 | 205         | Higgins   | 110           |

# Character-Manipulation Functions

These functions manipulate character strings:

| Function                               | Result     |
|--|------------|
| <code>CONCAT('Hello', 'World')</code>  | HelloWorld |
| <code>SUBSTR('HelloWorld',1,5)</code>  | Hello      |
| <code>LENGTH('HelloWorld')</code>      | 10         |
| <code>INSTR('HelloWorld', 'W')</code>  | 6          |
| <code>LPAD(last_name,12,'-')</code>    | *****24000 |
| <code>RPAD(first_name, 12, '-')</code> | 24000***** |

# Using Character-Manipulation Functions

1

```
SELECT CONCAT(CONCAT(last_name, ' 's job category is '), job_id)
"Job" FROM employees
WHERE SUBSTR(job_id, 4) = 'REP';
```

|   | Job                             |
|---|---------------------------------|
| 1 | Abel's job category is SA_REP   |
| 2 | Fay's job category is MK_REP    |
| 3 | Grant's job category is SA_REP  |
| 4 | Taylor's job category is SA_REP |

2

```
SELECT employee_id, CONCAT(first_name, last_name) NAME,
LENGTH (last_name), INSTR(last_name, 'a') "Contains 'a'?"
FROM employees
WHERE SUBSTR(last_name, -1, 1) = 'n';
```

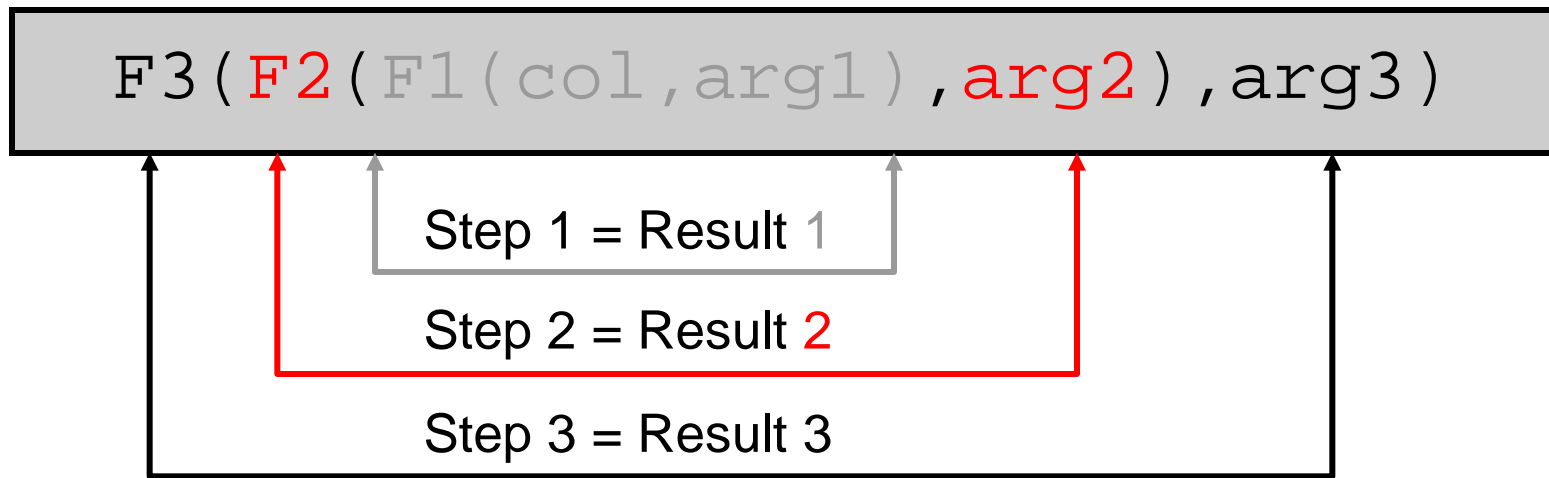

|   | EMPLOYEE_ID | NAME             | LENGTH(LAST_NAME) | Contains 'a'? |
|---|-------------|------------------|-------------------|---------------|
| 1 | 102         | LexDe Haan       | 7                 | 5             |
| 2 | 200         | JenniferWhalen   | 6                 | 3             |
| 3 | 201         | MichaelHartstein | 9                 | 2             |

# Lesson Agenda

- Single-row SQL functions
- Character functions
- **Nesting functions**
- Number functions
- Working with dates
- Date functions

# Nesting Functions

- Single-row functions can be nested to any level.
- Nested functions are evaluated from the deepest level to the least deep level.

# Nesting Functions: Example

```
SELECT last_name,  
       UPPER(CONCAT(SUBSTR (LAST_NAME, 1, 8), '_US'))  
FROM   employees  
WHERE  department_id = 60;
```

|   | 1 LAST_NAME | 2 UPPER(CONCAT(SUBSTR(LAST_NAME,1,8),'_US')) |
|---|-------------|--|
| 1 | Hunold      | HUNOLD_US                                    |
| 2 | Ernst       | ERNST_US                                     |
| 3 | Lorentz     | LORENTZ_US                                   |

# Lesson Agenda

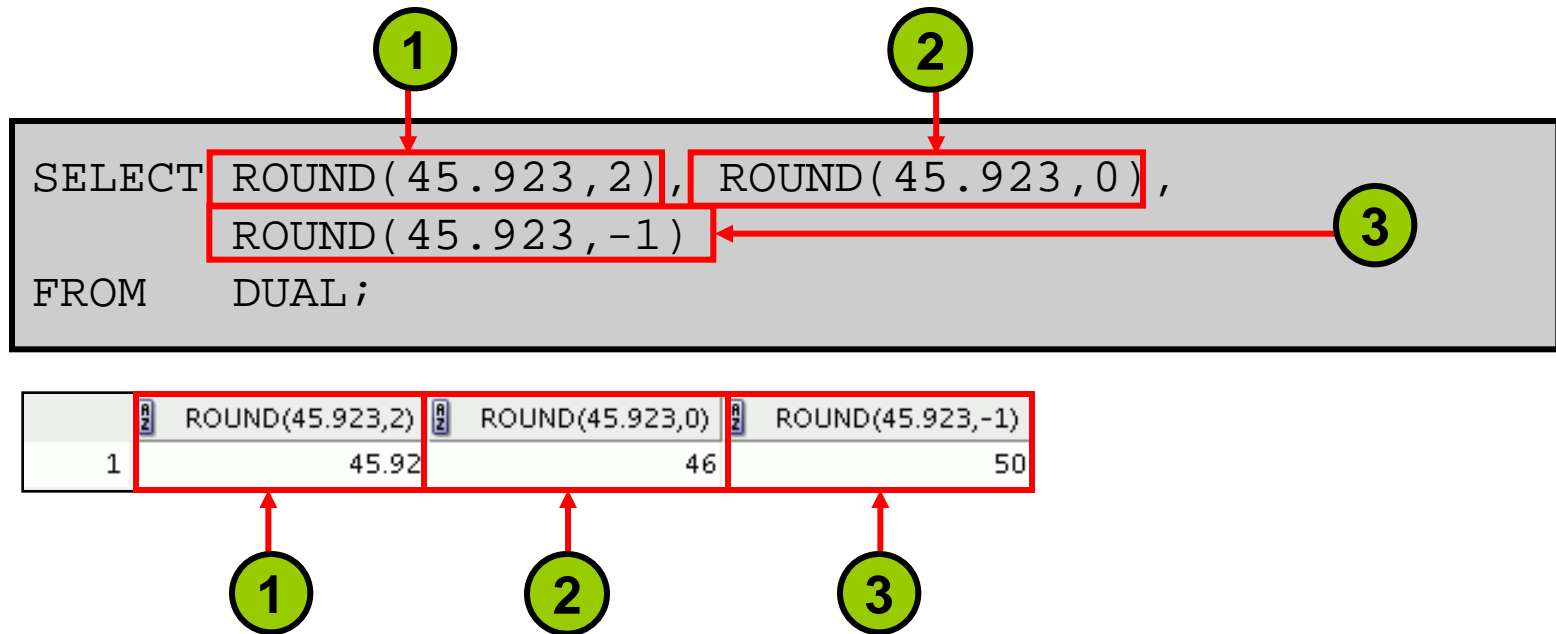

- Single-row SQL functions
- Character functions
- Nesting functions
- **Number functions**
- Working with dates
- Date Functions

# Numeric Functions

- **ROUND:** Rounds value to a specified decimal
- **TRUNC:** Truncates value to a specified decimal
- **CEIL:** Returns the smallest whole number greater than or equal to a specified number
- **FLOOR:** Returns the largest whole number equal to or less than a specified number
- **MOD:** Returns remainder of division

| Function             | Result |
|----------------------|--------|
| ROUND ( 45.926 , 2 ) | 45.93  |
| TRUNC ( 45.926 , 2 ) | 45.92  |
| CEIL ( 2.83 )        | 3      |
| FLOOR ( 2.83 )       | 2      |
| MOD ( 1600 , 300 )   | 100    |

# Using the ROUND Function

DUAL is a public table that you can use to view results from functions and calculations.

# Using the TRUNC Function

SQL statement illustrating the TRUNC function:

```
SELECT TRUNC(45.923, 2), TRUNC(45.923),  
       TRUNC(45.923, -1)  
FROM   DUAL;
```

Annotations:

- 1: Points to the first argument (45.923) in the first TRUNC function.
- 2: Points to the second argument (2) in the first TRUNC function.
- 3: Points to the third argument (-1) in the third TRUNC function.

|   | TRUNC(45.923,2) | TRUNC(45.923) | TRUNC(45.923,-1) |
|---|-----------------|---------------|------------------|
| 1 | 45.92           | 45            | 40               |

Annotations:

- 1: Points to the result 45.92.
- 2: Points to the result 45.
- 3: Points to the result 40.

# Using the MOD Function

Display the employee records where the `employee_id` is an even number.

```
SELECT employee_id as "Even Numbers", last_name
FROM employees
WHERE MOD(employee_id,2) = 0;
```

|    | Even Numbers | LAST_NAME |
|----|--------------|-----------|
| 1  | 174          | Abel      |
| 2  | 142          | Davies    |
| 3  | 102          | De Haan   |
| 4  | 104          | Ernst     |
| 5  | 202          | Fay       |
| 6  | 206          | Gietz     |
| 7  | 178          | Grant     |
| 8  | 100          | King      |
| 9  | 124          | Mourgos   |
| 10 | 176          | Taylor    |
| 11 | 144          | Vargas    |
| 12 | 200          | Whalen    |

# Lesson Agenda

- Single-row SQL functions
- Character functions
- Nesting functions
- Number functions
- Working with dates
- Date functions

# Working with Dates

- The Oracle Database stores dates in an internal numeric format: century, year, month, day, hours, minutes, and seconds.
- The default date display format is DD-MON-RR.
  - Enables you to store 21st-century dates in the 20th century by specifying only the last two digits of the year
  - Enables you to store 20th-century dates in the 21st century in the same way

```
SELECT last_name, hire_date
FROM employees
WHERE hire_date < '01-FEB-2008';
```

|   | LAST_NAME | HIRE_DATE |
|---|-----------|-----------|
| 1 | King      | 17-JUN-03 |
| 2 | Kochhar   | 21-SEP-05 |

...

# RR Date Format

| Current Year | Specified Date | RR Format | YY Format |
|--------------|----------------|-----------|-----------|
| 1995         | 27-OCT-95      | 1995      | 1995      |
| 1995         | 27-OCT-17      | 2017      | 1917      |
| 2001         | 27-OCT-17      | 2017      | 2017      |
| 2001         | 27-OCT-95      | 1995      | 2095      |

|  |       | If the specified two-digit year is:                     |  |
|--|-------|---|--|
|  |       | 0–49  | 50–99  |
| If two digits of the current year are: | 0–49  | The return date is in the current century               | The return date is in the century before the current one |
|  | 50–99 | The return date is in the century after the current one | The return date is in the current century                |

# Using the SYSDATE Function

SYSDATE is a function that returns:

- Date
- Time

```
SELECT sysdate  
FROM dual;
```

|   | SYSDATE   |
|---|-----------|
| 1 | 24-AUG-12 |

# Using the CURRENT\_DATE and CURRENT\_TIMESTAMP Functions

- CURRENT\_DATE returns the current date from the user session.

```
SELECT SESSIONTIMEZONE, CURRENT_DATE FROM DUAL;
```

| SESSIONTIMEZONE | CURRENT_DATE |
|-----------------|--------------|
| 1 Etc/Universal | 26-MAY-14    |

- CURRENT\_TIMESTAMP returns the current date and time from the user session.

```
SELECT SESSIONTIMEZONE, CURRENT_TIMESTAMP FROM DUAL;
```

| SESSIONTIMEZONE | CURRENT_TIMESTAMP                             |
|-----------------|---|
| 1 Etc/Universal | 26-MAY-14 12.25.34.401622000 AM ETC/UNIVERSAL |

# Arithmetic with Dates

- Add to or subtract a number from a date for a resultant date value.
- Subtract two dates to find the number of days between those dates.
- Add hours to a date by dividing the number of hours by 24.

# Using Arithmetic Operators with Dates

```
SELECT last_name, (SYSDATE-hire_date)/7 AS WEEKS
FROM   employees
WHERE  department_id = 90;
```

|   | LAST_NAME | WEEKS                              |
|---|-----------|------------------------------------|
| 1 | King      | 478.871917989417989417989417989418 |
| 2 | Kochhar   | 360.729060846560846560846560846561 |
| 3 | De Haan   | 605.300489417989417989417989417989 |

# Lesson Agenda

- Single-row SQL functions
- Character functions
- Nesting functions
- Number functions
- Working with dates
- **Date functions**

# Date-Manipulation Functions

| Function       | Result                             |
|----------------|------------------------------------|
| MONTHS_BETWEEN | Number of months between two dates |
| ADD_MONTHS     | Add calendar months to date        |
| NEXT_DAY       | Week day of the date specified     |
| LAST_DAY       | Last day of the month              |
| ROUND          | Round date                         |
| TRUNC          | Truncate date                      |

# Using Date Functions

| Function  | Result      |
|---|-------------|
| MONTHS_BETWEEN<br>( '01-SEP-05' , '11-JAN-04' ) | 19.6774194  |
| ADD_MONTHS ( '31-JAN-04' , 1 )                  | '29-FEB-04' |
| NEXT_DAY ( '01-SEP-05' , 'FRIDAY' )             | '08-SEP-05' |
| LAST_DAY ( '01-FEB-05' )                        | '28-FEB-05' |

# Using ROUND and TRUNC Functions with Dates

| Function                    | Result    |
|-----------------------------|-----------|
| ROUND ( SYSDATE , 'MONTH' ) | 01-AUG-03 |
| ROUND ( SYSDATE , 'YEAR' )  | 01-JAN-04 |
| TRUNC ( SYSDATE , 'MONTH' ) | 01-JUL-03 |
| TRUNC ( SYSDATE , 'YEAR' )  | 01-JAN-03 |

# Quiz

Which four of the following statements are true about single-row functions?

- a. Manipulate data items
- b. Accept arguments and return one value per argument
- c. Act on each row that is returned
- d. Return one result per set of rows
- e. Never modifies the data type
- f. Can be nested
- g. Accept arguments that can be a column or an expression

# Summary

In this lesson, you should have learned how to:

- Use the various types of functions available in SQL
- Use the character, number, and date functions in `SELECT` statements

# Practice 4: Overview

This practice covers the following topics:

- Writing a query that displays the `SYSDATE`
- Creating queries that require the use of numeric, character, and date functions
- Performing calculations of years and months of service for an employee
